Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia Voss, QA staff, and night-shift operators should be involved because they run the shifts and can explain their work, needs, and concerns. Nia wants their perspective before Mara plans the QA Control Review meeting. Nia can explain her own role, but the other operators' perspectives still need to be collected. (WO3-S01).

Engineering

Elias brings technical expertise to the review. He can explain the command and scheduler records, assess technical interpretations, and advise on feasibility. He needs read-only exports with source details and a discussion with the record custodian before delivery dates are promised. The available evidence does not establish where the repeated command originated. His expertise does not mean he owns every record or can approve spending, and a proposed restart is not a confirmed solution (W03-S02).

Operations

Mara's role is to keep the review organized and make sure the right people are included. She needs a clear summary of whose input is missing and who has authority to make decisions. She can follow up on contacts and participation, but the evidence does not confirm that she can approve spending or the project. Those decisions need confirmation from the authorized person. A proposed meeting does not mean everyone has agreed to attend (W03-S04).

Sponsor and record custodian

Sponsor: The sponsor's role is to authorize the proposed work through the organization's approval process. Operations sends recommendations to this role, but the evidence does not name the sponsor or confirm their spending limits. Those details still need to be verified. We cannot assume Mara has budget approval authority (W03-S03).

Record custodian: The record custodian is needed to confirm where the records came from and how they can be accessed. No person is named, and no one is confirmed as having accepted this responsibility. We need to verify the contact, their access authority, and their agreement to participate. Being listed or invited does not mean someone has agreed or given approval (W03-S03).

2. Relationships and next steps

Competing needs and tradeoff

Mara wants one daytime meeting, while Nia wants night-shift staff to have a voice. Both needs should be considered, and no agreement on timing has been confirmed (W03-S01; W03-S04). I would suggest a separate discussion that works with the night shift's schedule, then combine both groups' feedback into one summary for them to review. This takes more coordination, but everyone deserves a fair opportunity to contribute. Any disagreements should stay documented.

Consultation plan

Before the review meeting, speak with Nia and night-shift QA operators about their needs and participation. Meet with Elias to ask what the records establish and which read-only exports he needs. Ask Operations representatives about work impacts and scheduling through a short meeting. Include the record custodian in an access discussion before promising delivery dates, and request written confirmation of approval authority from the responsible manager before any spending or restart. Staff with little formal authority still need a voice because they understand daily work and will experience the effects of changes.

Missing voices and validation

Who is the record custodian, and have they agreed to provide access? Who has authority to approve spending or a restart? Mara should follow up with Elias to identify the custodian and confirm approval responsibilities with the appropriate manager. Record each person's name, role, response, and authority limits in the map. Until confirmed, mark access and participation as pending. Silence is not consent.

Next step toward requirements

Before detailed requirements interviews begin, we need to confirm missing participants, each person's role and decision authority, and access to the necessary records. We also need participation arrangements that allow night-shift staff to be heard. My stakeholder map helps Mara invite the right

> people by identifying who does the work, who is affected, who provides technical advice, and who can authorize decisions. Any disagreements or unanswered questions will remain documented. Completing the map or accepting an invitation does not authorize the project (W03-S04).

3. Book evidence connection

> **Book form connection**
>
> These tools and questions helped me build a consultation plan that gives everyone a fair opportunity to contribute. The schedule makes room for night-shift staff, and the questions help each person explain their experience, responsibilities, and needs. The authority register keeps me from assuming someone can approve a decision just because they are involved. My goal is to keep the review organized while making sure the people affected have a voice.
