CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Learner name not entered · Revision 37

R-01 · functional

Requirement: The system must clearly distinguish a slot awaiting final confirmation, an arrived visitor who cannot move forward, and an appointment that is ready for intake.

Source: W04-S01 · Dana Ruiz

Rationale: Dana's explanation and source W04-S01 show that "held" has two meanings. Clear statuses would help staff understand the appointment and avoid making the visitor wait while they figure it out.

Acceptance check: Given appointments in each of these three conditions, when intake staff check their statuses, then they can tell which is awaiting confirmation, which visitor cannot move forward, and which appointment is ready.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: We agreed that "held" and "ready" need separate meanings so staff are not left guessing. Staff should know whether the slot is waiting for confirmation or the visitor has arrived but cannot move forward. They also need to see who changed the status and the next approved step.

R-02 · user

Requirement: Intake staff must be able to see which condition applies to an unclear appointment status, who changed it, and the next approved step.

Source: W04-S01 · Dana Ruiz

Rationale: Dana's answers and source W04-S01 show why staff need this information. It would help them explain what happens next without calling around while the visitor waits.

Acceptance check: Given an appointment with a status exception, when intake staff review it, then they can identify the condition, who changed the status, and the next approved step

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: We agreed that "held" and "ready" need separate meanings so staff are not left guessing. Staff should know whether the slot is waiting for confirmation or the visitor has arrived but cannot move forward. They also need to see who changed the status and the next approved step.

R-03 · business

Requirement: A same-day slot may be offered only when both a room and a qualified clinician are available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Lena and source W04-S02 explain that an open calendar slot does not mean the clinic is ready. This keeps staff from promising a start time before the needed room and clinician are available.

Acceptance check: Given a same-day opening, when either a room or a qualified clinician is unavailable, then the slot cannot be offered. When both are available, the slot may be offered.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: We agreed that having a confirmation does not automatically mean the clinic is ready. Both a room and a qualified clinician must be available before a same-day slot is offered. If readiness changes, staff and the visitor need updated information so everyone knows what to expect.

R-04 · functional

Requirement: The system must provide affected staff and the visitor with an updated expected start time when readiness changes after confirmation, sharing only the information needed to act.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Lena explained that staff and visitors need updated expectations when readiness changes. This helps them plan their next steps without sharing unnecessary clinical details.

Acceptance check: Given a confirmed appointment, when readiness changes its expected start time, then affected staff and the visitor receive the updated expectation without unnecessary clinical details.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: We agreed that having a confirmation does not automatically mean the clinic is ready. Both a room and a qualified clinician must be available before a same-day slot is offered. If readiness changes, staff and the visitor need updated information so everyone knows what to expect.

R-05 · user

Requirement: Authorized staff must be able to see the visitor's approved language, communication, and support needs throughout confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: Priya and source W04-S03 explain that Intake could not see information the access team already had. Keeping these needs with the appointment prevents visitors from having to explain them again.

Acceptance check: Given an appointment with approved communication and support needs, when it is confirmed, rescheduled, and checked in, then authorized staff can still see those needs at every stage.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: We agreed that visitors should not have to keep explaining the same support needs at every step. Approved language, communication, and support needs should stay with the appointment through confirmation, rescheduling, and check-in, where authorized staff can see them. Visitors who cannot use the portal also need an equivalent phone or staff-assisted option.

R-06 · constraint

Requirement: The service must provide an equivalent phone or staff-assisted option for visitors who cannot use the portal.

Source: W04-S03 · Priya Shah

Rationale: Priya explained that access cannot depend on one digital channel. Visitors who cannot use the portal still need a way to receive the same service.

Acceptance check: Given a visitor who cannot use the portal, when they use the phone or staff-assisted option, then they can complete the same appointment tasks available through the portal.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: We agreed that visitors should not have to keep explaining the same support needs at every step. Approved language, communication, and support needs should stay with the appointment through confirmation, rescheduling, and check-in, where authorized staff can see them. Visitors who cannot use the portal also need an equivalent phone or staff-assisted option.

R-07 · nonfunctional

Requirement: Shared displays must show only the information staff need for their task. Access to detailed information must follow each staff member's role and authorization.

Source: W04-S04 · Jordan Kim

Rationale: Jordan and source W04-S04 explain that staff need enough information to do their work without exposing details they do not need.

Acceptance check: Given staff with different roles, when they use a shared display or open detailed information, then the display shows only task-needed information and detailed access is limited to their authorized role.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: We agreed that staff need enough information to do their jobs while protecting the visitor's privacy. Shared displays should show only what is needed, and detailed access should follow staff roles and authorization. The system also needs to keep who changed a status, the old and new values, and the time so authorized staff can review what happened.

R-08 · functional

Requirement: The system must keep a history of every status change, including who changed it, the previous value, the new value, and the time. This history must remain available during an exception review.

Source: W04-S04 · Jordan Kim

Rationale: Jordan and source W04-S04 show why a reliable history is needed. Staff must be able to follow what changed and who changed it when reviewing a problem.

Acceptance check: Given an appointment status change, when authorized staff review its history during an exception review, then they can see who made the change, the previous value, the new value, and the time.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: We agreed that staff need enough information to do their jobs while protecting the visitor's privacy. Shared displays should show only what is needed, and detailed access should follow staff roles and authorization. The system also needs to keep who changed a status, the old and new values, and the time so authorized staff can review what happened.

Professional Guidance Assessment

IIBA: IIBA provides guidance for business analysis, including understanding people's needs, asking useful questions, and checking requirements with the right stakeholders. This helped me connect my requirements to the problems described during the visits.

ISO/IEC/IEEE 29148: ISO, IEC, and IEEE jointly publish ISO/IEC/IEEE 29148, which provides guidance for developing and managing requirements. It helped me focus on writing requirements that are clear, traceable to a real need, and possible to check.

PMI: PMI focuses on managing and delivering projects. It is related because requirements help guide project work, but Week 4 focuses specifically on gathering, writing, and validating requirements.

Application: The guidance helped me make R-08 more specific and checkable. Instead of simply saying the system should keep a history, I listed exactly what it must keep: who changed the status, the previous value, the new value, and the time.

Prepared in Command Nexus. Canvas remains the official submission point.
